

Meidie Fei

Graduate Security Engineer | Detection Engineering and Security Automation

Melbourne, Australia

Email: meidie@mdpstudio.com.au | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

Work rights | Student visa subclass 500, valid until 15 March 2027; current visa conditions apply

Availability | Targeting full-time graduate roles from 1 December 2026; currently available Thursday to Sunday, approximately 15-25 hours per week

PROFILE

Computer Science graduate completing the final semester of RMIT's Master of Cyber Security. Seeking a Graduate Security Engineer role focused on detection, security automation, or secure software, with technical mentoring, regular review, and clear escalation support.

SECURITY SKILLS

- **Detection and triage:** phishing analysis, email authentication, IOC extraction, suspicious-signal review, endpoint evidence, ATT&CK mapping, STIX/Sigma-style workflows.
- **Secure engineering:** threat modelling, authentication, RBAC, CSRF, rate limiting, tamper checks, cryptography, privacy-aware logging, and fail-closed behavior.
- **Tools:** Python, FastAPI, PowerShell, SQL, Docker, GitHub Actions, pytest, Playwright, React/TypeScript, Linux, Cloudflare, and technical documentation.

PAID EXPERIENCE

Hospitality Houseperson - Southbank, Melbourne | Current

- Apply shift discipline, teamwork, service recovery, and clear escalation in live operations while completing the final university semester.

Hotel Products Direct - Warehouse and Inventory Assistant | July 2024 - March 2026

- Maintained 99%+ accuracy across 80-120 orders per shift and worked with IT to resolve inventory database discrepancies.

KodeKiddo - Programming Instructor | February 2021 - February 2022

- Taught programming fundamentals to students aged 6-18 and debugged code live for non-technical learners.

SELECTED SECURITY PROJECTS

PhishAnalyze / PayShield - Detection Engineering | [Source](#)

- Built the async analyser pipeline, normalised result contract, product verdict mapping, and evidence-to-decision workflow across phishing and payment-risk use cases.
- Validation: 1,384 tests in the current collected suite, live prototypes, and signed STIX/Sigma export checks. Boundary: development prototype, not a production detection guarantee.

RMM Hunter - Endpoint Triage | [Source](#)

- Built a Windows-first scanner and desktop evidence workflow for remote-access tools, persistence, living-off-the-land traces, and trust-health signals.
- Validation: public release, seeded-corpus evaluation, checksums, manifest, and artifact verifier. Boundary: current v0.3.4 build is an unsigned historical beta and is not EDR.

SecureVote - Secure Software | [Source](#)

- Extended an RMIT team project independently with identity separation, encrypted personal data, audit integrity, access controls, deployment hardening, and race-condition defence.
- Validation: 243-test collection, with 239 passing locally and four opt-in MySQL checks skipped. Boundary: portfolio prototype, not a production election service.

EDUCATION

RMIT University - Master of Cyber Security | March 2025 - Expected late 2026 | GPA 3.3

High Distinctions include Ethical Hacking and Security Testing, Secure Software Systems, Practical Data Science with Python, and Data Communications.

BINUS University - Bachelor of Computer Science | Completed October 2023 | GPA 3.20 | High Merit

Languages: English and Indonesian.
