

Meidie Fei

Cyber Security | AI Automation | Full-Stack Engineering

Melbourne, Australia

Email: meidie@mdpstudio.com.au | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

PROFILE

Computer Science graduate and final-semester RMIT Master of Cyber Security student building practical systems across security, AI-assisted workflows, automation, data, and full-stack delivery. Strongest fit for graduate and junior roles where evidence, reliability, technical range, and clear communication matter.

CORE STRENGTHS

- Security-aware engineering: secure coding, OWASP concepts, authentication, RBAC, CSRF, rate limiting, threat modelling, cryptography, security headers, and privacy-aware delivery.
- Detection and investigation: phishing analysis, suspicious-signal review, IOC extraction, evidence summaries, false-positive discipline, ATT&CK mapping, and STIX/Sigma-style detection thinking.
- AI and automation: structured outputs, source boundaries, model-output review, approval gates, prompt-injection awareness, hallucination checks, browser automation, and redacted records.
- Full-stack delivery: React, TypeScript, Python APIs, SQL/PostgreSQL/Supabase, dashboards, authentication flows, tests, Docker, Cloudflare, Netlify, and technical handover.
- Data and evaluation: pandas, NumPy, scikit-learn, forecasting, leakage avoidance, validation design, metrics, error analysis, and reproducible experiment notes.

EXPERIENCE

MDP Studio - Co-Founder and Technical Lead

Melbourne, Australia | January 2026 - Present

- Co-founded a pre-revenue web and AI venture building websites, dashboards, internal tools, automation, and review-gated AI workflows for SME-oriented problems.
- Build and review Python and TypeScript systems using React/Vite, APIs, SQL/PostgreSQL/Supabase, Docker, Cloudflare, Netlify, GitHub, Ubuntu, and deployment workflows.
- Designed AI-assisted processes where evidence is checked before higher-risk external actions, with source boundaries, privacy controls, approval checkpoints, and clear failure states.
- Built an internal lead and landing-page workflow that processed 146 prospects and supported 123+ deployed landing pages through review queues and deployment automation.
- Manage DNS, deployment checks, issue triage, documentation, and handover across internal product work.

Hotel Products Direct - Warehouse and Inventory Assistant

Melbourne, Australia | July 2024 - March 2026

- Maintained 99%+ accuracy across 80-120 orders per shift in a high-volume environment where process discipline and escalation mattered.
- Identified inventory database discrepancies and worked with IT to resolve data and process issues.

KodeKiddo - Software Programming Instructor / Mobile Programmer Intern

Indonesia | February 2021 - February 2022

- Taught programming fundamentals to students aged 6-18 using Android Studio, Unity, Java/mobile concepts, and structured debugging.
- Debugged code in real time and explained technical issues clearly to non-technical learners.

BKPSDM - Data Assistant

Indonesia | Earlier experience

- Reviewed, verified, and corrected employee records in a government HR system with confidentiality-aware data-quality practices.

SELECTED PROJECTS

PhishAnalyze / PayShield - Detection and Decision Workflows | [Repository](#)

- Built a five-stage async pipeline for suspicious-email ingestion, feature extraction, concurrent analysis, weighted scoring, evidence summaries, analyst feedback, and decision output.
- Covered SPF/DKIM/DMARC, URLs and domains, brand impersonation, attachments, QR decoding, language and intent, supplier mismatch, BEC language, and payment-risk indicators.
- Turned evidence into explainable phishing verdicts and payment outcomes, with STIX 2.1 IOC export, Sigma-style detection content, and ATT&CK T1566-oriented mapping.

ApplyPilot - Review-Gated AI Workflow Prototype

- Designed a local prototype around truthful generation, evidence checks, structured output contracts, source boundaries, approval gates, redacted logs, and separated credentials.
- Kept external submission explicitly human-controlled and documented the system as a prototype rather than a hands-off application service.

SecureVote - Secure Application Controls | [Repository](#)

- Extended an RMIT team project with anonymous voting, encrypted personal data, HMAC-backed audit logs, RBAC, CSRF protection, MFA, rate limiting, WAF controls, and Vault Transit signing.
- Validated access, cryptographic flows, malformed data, pagination, and vote-casting concurrency with 100+ pytest checks.

Novartis Datathon 2025 - Forecasting and Evaluation | [Repository](#)

- Ranked 7th and Top 10 in a pharmaceutical sales-forecasting challenge predicting 24 months of post-generic-entry drug volume.
- Built leakage-aware features, brand-level train/validation splits, multi-output Ridge regression, benchmark comparisons, and error analysis.

CryptoToolkit / AES Secure Vault - Cryptography and Key Handling | [CryptoToolkit](#) | [AES Vault](#)

- Built interactive cryptography and attack demonstrations backed by known-answer tests, plus a Python AES-256-GCM package with Argon2id, AAD binding, tamper detection, and explicit failure behaviour.

EDUCATION

RMIT University - Master of Cyber Security

Melbourne, Australia | March 2025 - Expected late 2026 | GPA 3.3

High Distinctions include Ethical Hacking and Security Testing, Secure Software Systems, Practical Data Science with Python, and Data Communications.

BINUS University - Bachelor of Computer Science

Indonesia | Completed October 2023 | GPA 3.20 | High Merit

Mobile Application and Technology program. Thesis: Development of Pekalongan City Guide Application with Firebase Realtime Database.

AVAILABILITY

Based in Melbourne. Open to graduate and junior roles across cyber security, AI evaluation, automation, full-stack engineering, and technical operations. Languages: English and Indonesian.
